

Fracturation hydraulique au forage — état de contrainte anisotrope ($\sigma'_H = 6,8$ MPa, $\sigma'_h = 4,6$ MPa)

321 joints rompus, 747 faces mouillées (105 au départ)

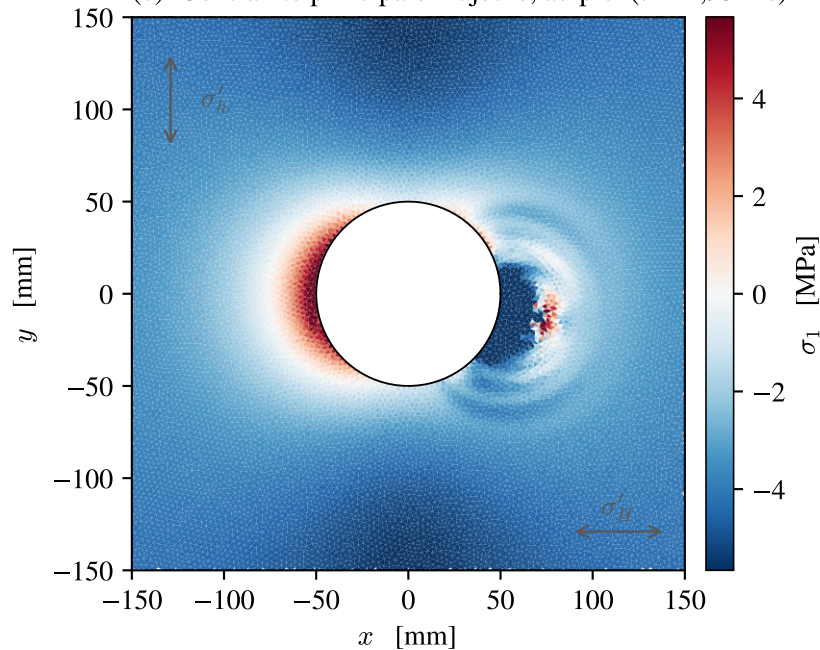

(a) Pression de puits

(b) Volume de la cavité

(c) Contrainte principale majeure, au pic ($t = 2,93$ ms)

(d) Fissuration ($t = 4,00$ ms)
