

Taille des blocs intacts decoupees par la fissuration — bleu = un seul element (anneau granule), jaune = gros bloc

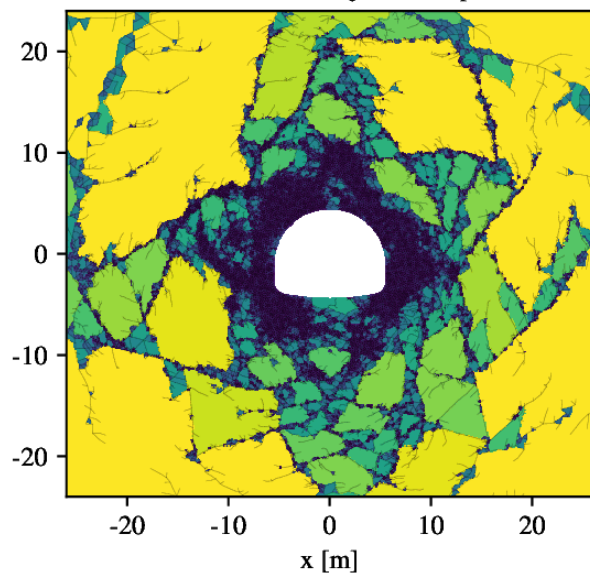

adaptatif (reference)
t = 0.42 s, 21378 joints rompus

adaptatif + pointe relachee /1,6
t = 0.41 s, 39500 joints rompus

intrinsique (tous joints des t = 0)
t = 0.54 s, 35906 joints rompus

$\log_{10}$ (aire du bloc [m^2])
