

Vérification des derniers résultats — triaxial et maillage (loi f(D))

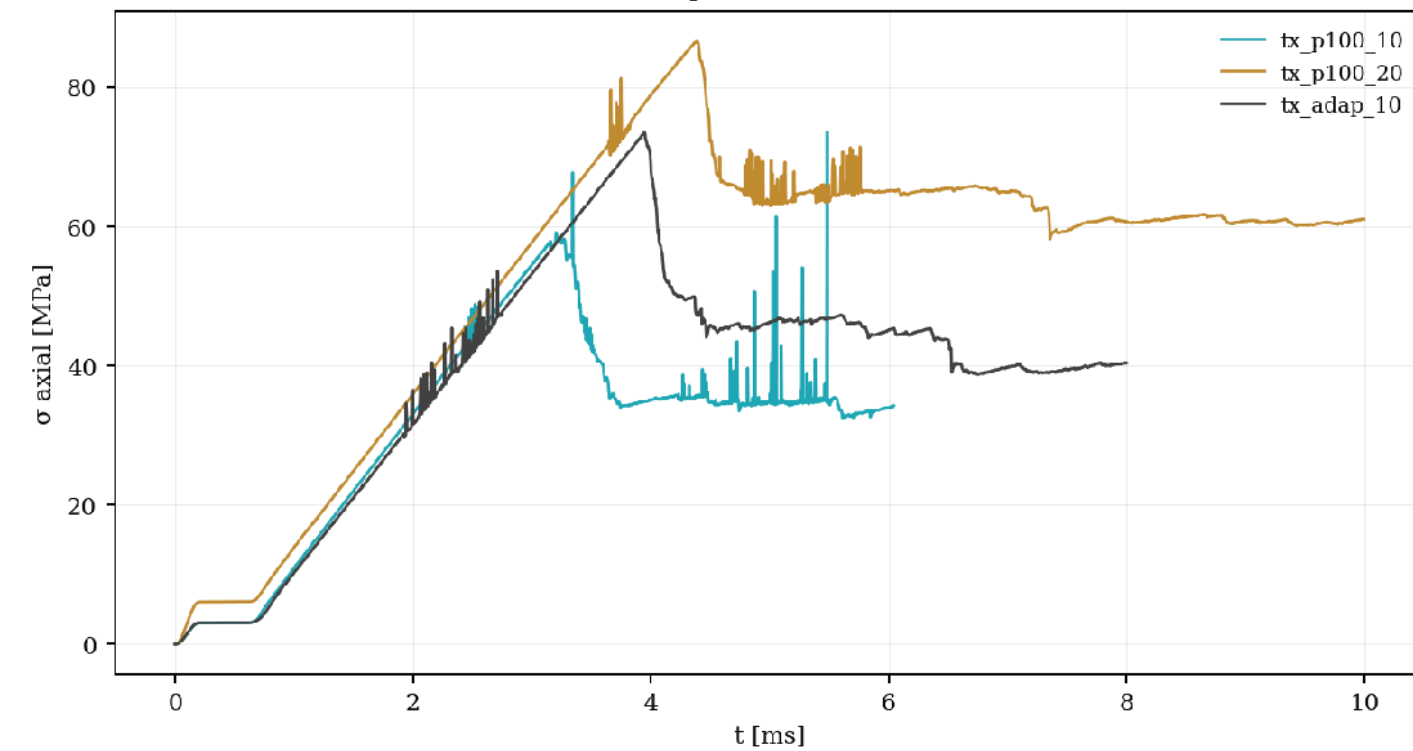

(a) triaxial — courbes complètes (plein = adaptatif, tirets = 100E)

(b) enveloppes + ajustement de Coulomb

(c) l'anomalie : tx p100 10 (112 MPa ?) vs voisins

(d) sensibilité au maillage (fig. 15-16) — NON convergé
